Preventing Heart Disease

Now is the right time to start paying attention to your heart health. You can lower your risk for heart attack and stroke no matter how old you are by knowing the risk factors that affect your heart.

THE SYMPTOMS
Men and women may experience different symptoms of heart attack.

- Men are more likely to experience symptoms including chest pain or pressure, or discomfort in the left arm.
- Women may experience shortness of breath, flu-like symptoms, and back or neck pain.

YOUR NUMBERS
Many tests to gauge your heart health are quick and easy.

- High blood pressure
- High LDL (bad) cholesterol
- High blood sugar
  can cause heart disease.

YOUR FAMILY HISTORY
Your health care provider can use this information to tailor advice on how you can reduce your risk for heart disease.

What numbers should you look for?

<table>

Nutrition Facts

- Total Fat
- Saturated Fat
- Trans Fat
- Cholesterol
- Sodium
- Total Carbohydrate
- Sugars

Check nutrition labels, especially on processed foods.

- That means eating mostly vegetables, fruit, beans, nuts and whole grains.
- Instead of butter, use olive oil.
- Limit red meat to a few times each month.
- Limit saturated fat, trans fats, sodium and sugar.
- Walking the dog, gardening, and using the stairs count as activities that can help your heart.

You cut your risk of a heart attack by 50% after one year as a non-smoker!

If you smoke, you should stop.

Quit before turning 50

People who quit smoking before age 50 have 50% less risk of dying in the next 15 years compared with people who continue to smoke.

It’s never too late to start taking care of your heart

You’d be surprised at how quickly some of the steps above will reduce your risk and improve your heart health.
