Consent for Oral Medication or Food Challenge

The oral challenge involves consuming a serving of the food/medication in a slow, graded fashion under medical supervision. The oral challenge procedure is the most accurate and safest way to determine whether a food/medication needs to be avoided or will be tolerated.

You/your child will be observed for symptoms such as itching, rash, abdominal pain, or difficulty breathing. If any of these symptoms develop you/your child will be treated immediately. In most cases, this will involve the use of oral antihistamine or epinephrine to prevent an allergic reaction from getting worse.

Risks:
Mild to severe allergic reactions including life-threatening anaphylaxis.
Mild symptoms may include: itching, skin rash (can also occur 2-3 days after challenge test), nausea, vomiting, diarrhea, stomach upset, stuffy “runny” nose or sneezing. These symptoms are usually short-lived, lasting less than 2 hours.
The major risks involved include severe breathing difficulties, low blood pressure, wheezing, swelling of the face and/or throat and life-threatening anaphylaxis.

Medications, personnel and equipment will be immediately available to treat allergic reactions should they occur

Benefit: Determining whether the food or medication may be consumed or reintroduced.

Alternative: Continue strict avoidance of food or medication

Informed Consent:
I acknowledge that the doctor has explained the nature and purpose of the Oral Challenge Test as well as the risks involved and all of my questions, if any, have been answered to my satisfaction. I understand I have the right to change my mind at any time, including after I have signed this form, preferably following a discussion with my doctor.

I give my consent and authorize Dr. ___________________________ to perform an oral food/medication challenge to the following food/medication ______________________________________________________.
