

Deep Brain Stimulation Support Group

Neuroscience Supportive Care Program

Deep brain stimulation (DBS) is a surgery to implant a device that sends electrical signals to brain areas responsible for body movement. Similar to a heart pacemaker, a neurostimulator uses electric pulses to regulate brain activity. This group is open to anyone wanting to learn more about Deep Brain Stimulation (DBS) surgery.

Registration is required.

Dates:	September 19, December 19
Time:	11:00am–12:45pm
Location:	Stanford Neuroscience Health Center 213 Quarry Road, Wellness Room 1511 Palo Alto, CA 94304
To register:	For more information or to RSVP email to Steven Russell swrussell@stanford.edu
Website	www.stanfordhealthcare.org/nscp

The Stanford Supportive Care Program provides free classes, workshops, fitness classes, services, and support to all neuroscience patients regardless of where they receive their care.
