

Skin Care During Cancer Therapy: Sun Protection and Moisturizing

Cancer Supportive Care Program

Cancer therapy can cause changes to your skin, hair, and nails. These changes can affect how you look, how you feel, and can even interfere with your treatment. Thankfully, there are steps you can take to protect yourself, including proactively managing dry skin and protecting your skin from the sun. The Stanford Supportive Dermato-Oncology Clinic is here to guide you through the changes you might face during cancer therapy and the actions you can take to protect your skin.

Registration required.
