

# Skin Care During Taxane Chemotherapy

## Cancer Supportive Care Program

Taxane therapy, including docetaxel (Taxotere®) and paclitaxel (Taxol®), can cause changes to your skin, hair, and nails. These changes can affect how you look, how you feel, and can even interfere with your treatment. Thankfully, there are many steps you can take to protect yourself and potentially prevent these changes from happening at all. The Stanford Supportive Dermato-Oncology Clinic is here to guide you through the changes you might face during cancer therapy and the actions you can take to preserve your quality of life.

### Registration required.
