Virtual Colonoscopy Exam Preparation

For 7 days before the test:

DO NOT take iron pills (Ferrous Sulfate).
DO NOT EAT foods with seeds such as poppy, tomatoes, watermelon, or cucumbers. Avoid celery, grapes, green peas, beans, seaweed, popcorn and nuts.

Day before the test:

Starting at midnight, drink clear liquids only: Clear liquids includes water, tea with no milk, black coffee, 7-UP, ginger ale, apple juice, white grape juice, white cranberry juice (no juice that is red or purple), clear soup broth, gelatin (no red, blue, green or purple), popsicles (no red or purple).

You may wish to place the kit in the refrigerator to make the contents more pleasant to drink. Or, you may drink them at room temperature.

Do not eat any solid food while on this diet. Do not drink alcohol. No dairy products.

<table>
<thead>
<tr>
<th>Step One - 11:00 am</th>
<th>Take two Bisacodyl® (Dulcolax) tablets (5 mg each) with 1 glass of clear liquids.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step Two - 2:00 pm</td>
<td>Drink one bottle (296 mL) of magnesium citrate. Follow this with 6 cups of clear liquids over the next 90 minutes.</td>
</tr>
<tr>
<td>Step Three - 5:00 pm</td>
<td>Mix package of barium sulfate (EZ CAT) with 450 mL of water. Drink.</td>
</tr>
<tr>
<td>Step Four - 5:30 pm</td>
<td>Drink the second bottle (296 mL) of magnesium citrate. Follow this with 6 cups of clear liquids over the next 90 minutes.</td>
</tr>
<tr>
<td>Step Five - 8:00 pm</td>
<td>Mix 2 bottles (60 mL total) of diatrizoate (Gastrografin) in 1 glass of clear juice, soda, or water. Drink.</td>
</tr>
<tr>
<td>12:00 MIDNIGHT</td>
<td>No Food or Liquids</td>
</tr>
</tbody>
</table>

The day of the test be sure to take your blood pressure and heart medicines with a sip of water.

Do not eat or drink anything else.

Special Precautions

In general, you can (and should) continue to take any routine prescribed medications during the preparation. However, take them 1 hour before or at least one hour after taking the laxative (magnesium citrate).

In the event that polyps are found on the virtual colonoscopy, certain eligible patients may choose to undergo same day traditional colonoscopy, and removal of polyps (polypectomy) may be performed. For this reason, patient taking anticoagulants, aspirin, NSAIDS (e.g., Advil, Aleve, Motrin), plavix, supplements and/or vitamins should consult with their physician before scheduling a virtual colonoscopy.

If you take blood pressure or heart medications, or prednisone or other steroids, take them before 7 am with a sip of water on the day of the test.

If you are taking INSULIN the dosage may need to be adjusted the day prior and the morning of the test. Contact your physician for instructions regarding dosage.
What is Virtual Colonoscopy?

Virtual Colonoscopy is a medical imaging procedure which uses computed tomography (CT), sometimes called a CAT scan, and advanced computer software to produce two- and three-dimensional images of the colon that can be viewed on a video screen.

The major reason for performing virtual colonoscopy is to screen for polyps or cancers in the large intestine. Polyps are growths that arise from the inner lining of the intestine. Some polyps may grow and turn into cancers. The goal of screening with colonoscopy is to find these growths in their early stages, so that they can be removed before cancer has had a chance to develop.

ACS guidelines for colorectal screening:
- 50 years of age or older
- A personal history of colorectal cancer or adenomatous polyps
- A personal history of chronic inflammatory bowel disease (Crohn's disease or ulcerative colitis)
- A strong family history of colorectal cancer or polyps (cancer or polyps in a first-degree relative [parent, sibling, or child] younger than 60 or in 2 or more first-degree relatives of any age)
- A known family history of hereditary colorectal cancer syndromes such as familial adenomatous polyposis (FAP) or hereditary non-polyposis colon cancer (HNPCC)

What happens during the test?

After changing into a gown you will lie on the CT scanner table. The technologist will need to distend your colon by placing a small soft tube into the rectum and administer CO2 gas. As the gas is administered you may experience a bloated feeling and mild discomfort. You will be scanned initially lying on your back and then turned onto your stomach and scanned a second time. Then you are done!

American Cancer Society

The American Cancer Society estimates that nearly 150,000 men and woman are diagnosed with colorectal cancer and almost 50,000 will die of the disease every year - this is the 3rd most common cancer diagnosed and the 2nd leading cause of death from cancer in the United States. In 2008 the American Cancer Society approved virtual colonoscopy as an alternative to traditional colonoscopy.

What are the benefits of Virtual Colonoscopy?
- Less invasive than traditional colonoscopy
- Procedure takes less time (30 minutes) than a traditional colonoscopy
- Sedation and pain-relievers are not needed, so there is no recovery period
- Patients can return to normal activities immediately after the procedure
- Lower risk of complications than colonoscopy
- Ideal for patients with an increased risk of complications or elderly patients who cannot tolerate a traditional colonoscopy
- Helpful when colonoscopy cannot be completed when the bowel is too narrow, obstructed, or elongated
- Visualizes the entire bowel
- Proven effective in large clinical trials
- Patients tend to prefer virtual colonoscopy

The Stanford Diagnostic Imaging Advantage
- State-of-the-Art Technology: The latest generation 64- and 128-Row CT scanners
- Abdominal radiology subspecialist interpretations
- Extensive experience in 3D Imaging
- If polyps are found, Stanford Diagnostic Imaging can coordinate eligible patients a same day traditional colonoscopy with the Stanford Gastroenterology Clinic
- Stanford Diagnostic Imaging utilizes CO2 gas instead of air to inflate the colon. The gas is absorbed by the body and causes less cramping and bloating than air thus ensuring that patients have a better experience.
- Patient-Centric Environment

CTVC-KIT (Bisacodyl® (Dulcolax), EZ CAT, Gastrografin)

CTVC-KIT is available at this location only. Pick-Up or Mail Delivery available

Magnesium Citrate – Over the counter & available at any local pharmacy. Mail delivery not available.
